Free Screening of the Oscar-Nominated Documentary:
GASLAND

There is nothing “natural” about fracking for Natural Gas.

Friday, Oct 21 5:30-8:30 PM
Pearl Hall, UNM School of Architecture and Planning, ABQ, NM

Can you light your tap water on fire? Residents across the country can no longer drink water contaminated by hydraulic fracturing, or "fracking," a dangerous method of natural gas extraction.

GUEST PANEL with Q & A afterwards:

• **Dr. Don Hamilton, DVM**: Veterinarian, homeopath and co-founder of Drilling Mora County, for the past four years, Hamilton has been proactively working to protect our rights to clean water, air, land and the safety of our wild animals and their habitats.

• **Kathleen Dudley**: Writer, photographer, farmer, and co-founder of Drilling Mora County, Dudley has helped launch a county-wide educational process on natural gas development and the impacts on our health, communities, and cultures.

• **Darlene Gomez**: an ABQ attorney raised on a ranch exploited by oil in Northern NM. Because they didn't have the drilling rights, Oil was able to move in and has been active on their ranch for 30-40 years. They haven't been able to use their well for over 30 years.
