TIP OF THE MONTH

April 2012

Tips @ Home Thermostat Settings

“When at home, set the thermostat no lower than 78 degrees Fahrenheit. You can reduce cooling cost 3-5 percent for each degree you can keep the thermostat set above 78”

Tips @ Work Office Equipment

Try to avoid using screen savers on office computers. It is more efficient to use the power down settings, or turn off the monitor completely when away from the desk.

Try and avoid leaving any equipment on “standby mode.” It will continue to use energy, even when the piece of equipment is not being used.
